

Our consultants have been working with Hyperion Enterprise since version 1.0! Our depth of experience in Hyperion Enterprise, combined with our expertise in HFM, makes us uniquely qualified to provide guidance and best practices for converting from Enterprise to HFM. Our teams are comprised of consultants who have deep experience in both tools. This means that ITI can guide your organization through designing, implementing, and training users on an HFM application that builds upon the foundation established in your Enterprise application while taking advantage of all the features, functionality, and system opportunities available in HFM.
